

TESTIMONIAL

STATISTICAL-EN-ROUTE CHARGES SYSTEM

NAVIAIR

SERIS MANAGES THE REVENUE - HIGH EFFICIENT

Naviair, who develops and provides air traffic services - Air Navigation Services in Denmark, is one of our customers, who has implemented our Statistical, en-Route charges Information system **SERIS**. Below Naviair states about SERIS system:

SERIS - the most effective route charges system on the market

SERIS is the most effective route charges system out on the market ensuring a swift reporting to EUROCONTROL and at the same time reducing the administrative costs dramatically.

Full automatic system

SERIS has a fully automated administrative backend, which automatically records all flights on the basis of radar data and flight plans. The system automatically generates the data files to be reported to EUROCONTROL. Now operators only have to check up on insufficient data.

In addition, SERIS incorporates efficient tools for handling corrections and claims (COR/CLA), and generates a swifter mode of reporting—results in less administrative resources spending.

Strong financial follow-up and managerial tool

The effective Web-based reporting facilities built in the system's fronted also mean that SERIS is a fabulously strong financial follow-up and managerial tool. User-friendly graphical displays of statistics and tables review precisely the financial status, budget forecast and flow. That sort of thing puts new life into the managerial mobility. Knowledge is powerful.

Easy to integrate

SERIS is a standard software, which can be integrated with all systems, and is therefore ready to be implemented in all organizations. In co-operation with Naviair, the airport division of DSE A/S has developed this system that in a nice and easy way provides all data transmitted on-line to the Central Route Charges Office of EUROCONTROL.

Further information
